

Going ahead – From idea to „apps on prescription“ (DiGA)

DiGA – Part of a digital ecosystem

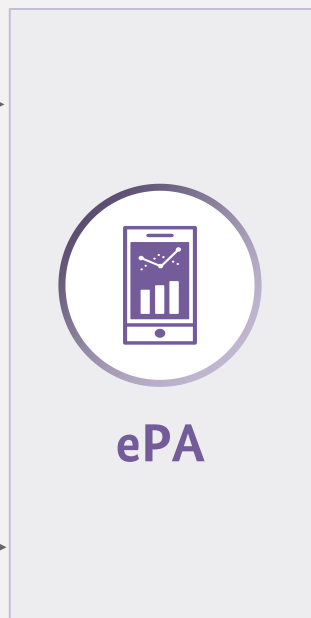

E-prescriptions

- E-prescriptions can be uploaded to the e-health record
- Physician receives complete history of prescriptions

DiGA

- Data can be exported into the e-health record in a structured manner
- Physician receives additional information to adapt therapies

Physicians and other medical professionals

Research Data Centre

- Patients can decide to donate data for research purposes
- Donation of data is based on consent
- Research data centre is the „gate keeper“ and reviews request for data
- Enables research and innovation to improve care
